

OPERATIONS GUIDE

Hull Production

This service is part of a set of services to make you familiar with new methods and allow you to better utilise your Tribon M3 investment.

Our consultants have profound shipbuilding experience, as well as representing a number of nationalities and languages. Curriculum Vitae (CVs) are available on request.

Reasons

To ensure that the Tribon M3 Hull Production Output is consistent from all designers and that it suits the customers' production facilities.

Participants

At least one participant from each of the following disciplines:

- Design Office – Hull
- Production Engineering
- Production Planning
- Hull Production

Pre-requisites

All participants must be familiar with the Tribon M3 concept. At least one participant must have attended the Hull Modelling training course.

Agenda

- Rules for part naming in production
- Plate cutting information for each cutting machine
- Stiffener cutting and bending information for each workstation
- Plate cutting for curved plates and bending information for curved plates
- Erection information for curved panels
- Accuracy marking information
- Panel line information
- Robot welding information
- Assembly drawings and parts listing information

Process Leader

A senior shipbuilding consultant from AVEVA.

Process Approach

Group meetings and discussions.

Time

Five days.

Expected Results

Operations Guide containing examples of all types of Hull Production information for the customer site.
